## Amendments to the claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

## Listing of claims

1. (currently amended) A liposomal antitumor composition, comprising a platinum complex having the formula

$$R_1$$
-Pt- $X_2$ 

entrapped in a liposome, where the liposome comprises dioleyl phosphatidyl glycerol, and where R<sub>1</sub> is diaminocycloalkyl and X is halogen.

Claims 2-36 (canceled)

- 37. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising the steps:
- (a) adjusting the pH of a composition comprising a liposome-entrapped first compound, so that the pH is made acidic, said first compound having the formula

$$R_1$$
—Pt  $R_3$ 

where R<sub>1</sub> is diaminocycloalkyl and R<sub>2</sub> and R<sub>3</sub> independently have the formula

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms; and

- (b) after a predetermined time, adjusting the acidic pH of the composition of step (a) to a pH greater than 7.
- 38. (new) The liposomal antitumor composition of claim 37 where the adjusting of step (a) comprises adding an acidic solution.

- 39. (new) The liposomal antitumor composition of claim 38 wherein said acidic solution comprises sodium chloride.
- 40. (new) The liposomal antitumor composition of claim 38 wherein said acidic solution is an aqueous solution.
- 41. (new) The liposomal antitumor composition of claim 38 where the acidic solution is an acidic saline solution.
- 42. (new) The liposomal antitumor composition of claim 37 wherein said adjusted pH of step (a) is in the range of 2 to 6.5.
- 43. (new) The liposomal antitumor composition of claim 37 where the adjusting of step (b) comprises adding a buffer solution to the composition of step (a).
- 44. (new) The liposomal antitumor composition of claim 37 wherein the method further comprises before said adjusting of step (a), the step of entrapping said first compound in said liposome.
- 45. (new) The liposomal antitumor composition of claim 44 wherein said entrapping is done in the presence of sodium chloride or chloroform.
- 46. (new) The liposomal antitumor composition of claim 45 wherein said adjusting of step (a) comprises reconstituting a lyophilized composition containing the liposome-entrapped first compound using an acidic solution.
- 47. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising the steps:
- (a) adjusting the pH of a composition comprising a liposome-entrapped first compound, so that the pH is made acidic, said first compound having the formula

$$R_1$$
—Pt $R_3$ 

where R<sub>1</sub> is diaminocycloalkyl and R<sub>2</sub> and R<sub>3</sub> independently have the formula

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, said platinum complex having the formula

$$R_1 - P_t - X_2$$

where R<sub>1</sub> is as defined above and X is halogen; and

- (b) after a predetermined time, adjusting the acidic pH of the composition of step (a) to a pH greater than 7.
- 48. (new) The liposomal antitumor composition of claim 47 where the adjusting of step (a) comprises adding an acidic solution.
- 49. (new) The liposomal antitumor composition of claim 48 wherein said acidic solution comprises sodium chloride.
- 50. (new) The liposomal antitumor composition of claim 48 wherein said acidic solution is an aqueous solution.
- 51. (new) The liposomal antitumor composition of claim 48 where the acidic solution is an acidic saline solution.
- 52. (new) The liposomal antitumor composition of claim 47 wherein said adjusted pH of step (a) is in the range of 2 to 6.5.
- 53. (new) The liposomal antitumor composition of claim 47 where the adjusting of step (b) comprises adding a buffer solution to the composition of step (a).

- 5 - NY2: 1489820.1

- 54. (new) The liposomal antitumor composition of claim 47 wherein the method further comprises before said adjusting of step (a), the step of entrapping said first compound in said liposome.
- 55. (new) The liposomal antitumor composition of claim 54 wherein said entrapping is done in the presence of sodium chloride or chloroform.
- 56. (new) The liposomal antitumor composition of claim 47 wherein said adjusting of step (a) comprises reconstituting a lyophilized composition containing the liposome-entrapped first compound using an acidic solution.
- 57. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising comprising the steps:
- (a) adjusting the pH of a composition containing a liposome-entrapped first compound in the presence of sodium chloride, so that the pH is made acidic, said first compound having the formula

where DACH is 1,2-diaminocyclohexane and R2 and R3 independently have the formula

$$---$$
0  $--$ 

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, said platinum complex having the formula

where DACH is as defined above; and

(b) after a predetermined time, adjusting the acidic pH of the composition of step (a) to a pH greater than 7.

- 58. (new) The liposomal antitumor composition of claim 57 where the adjusting of step (a) comprises adding an acidic solution.
- 59. (new) The liposomal antitumor composition of claim 58 wherein said acidic solution comprises sodium chloride.
- 60. (new) The liposomal antitumor composition of claim 58 wherein said acidic solution is an aqueous solution.
- 61. (new) The liposomal antitumor composition of claim 58 where the acidic solution is an acidic saline solution.
- 62. (new) The liposomal antitumor composition of claim 57 wherein said adjusted pH of step (a) is in the range of 2 to 6.5.
- 63. (new) The liposomal antitumor composition of claim 57 where the adjusting of step (b) comprises adding a buffer solution to the composition of step (a).
- 64. (new) The liposomal antitumor composition of claim 57 wherein the method further comprises before said adjusting of step (a), the step of entrapping said first compound in said liposome.
- 65. (new) The liposomal antitumor composition of claim 64 wherein said entrapping is done in the presence of sodium chloride or chloroform.
- 66. (new) The liposomal antitumor composition of claim 57 wherein said adjusting of step (a) comprises reconstituting a lyophilized composition containing the liposome-entrapped first compound using an acidic solution.
- 67. (new) A method for treating cancer, the method comprising administering to a mammal in need thereof the liposomal antitumor composition of any one of claims 37, 47 or 57.

- 68. (new) The method of claim 67, wherein said mammal is a human.
- 69. (new) The method of claim 67, wherein said mammal has a cancer that is ovarian cancer, testicular cancer, lung cancer, cancer of the head or neck, esophageal cancer, bladder cancer, a sarcoma, a lymphoma or a mesothelioma.
- 70. (new) A pharmaceutical composition comprising an amount of the liposomal antitumor composition of any one of claims 37, 47 or 57 effective to treat cancer and a pharmaceutically acceptable carrier or diluent.
- 71. (new) The liposomal antitumor composition of any one of claims 1, 37, 47 or 57, wherein said liposome is the product of a process comprising mixing chloroform solutions of lipids.
- 72. (new) A liposomal antitumor composition, comprising a platinum complex having the formula

intercalated between the bilayers of a liposome, where DACH is diaminocyclohexane, and where the liposome comprises dioleyl phosphatidyl glycerol and is the product of a process comprising mixing chloroform solutions of lipids.

73. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising adjusting the pH of a composition containing a liposome-entrapped first compound, so that the pH is made acidic, said first compound having the formula

$$R_1$$
—Pt  $R_3$ 

where R<sub>1</sub> is diaminocycloalkyl and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$---$$
O  $-$ C  $-$ C  $-$ R<sub>5</sub>

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, and where said liposome comprises dioleyl phosphatidyl glycerol and is the product of a process comprising mixing chloroform solutions of lipids.

74. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising adjusting the pH of a composition containing a liposome-entrapped first compound, so that the pH is made acidic, said first compound having the formula

$$R_1$$
—Pt  $R_3$ 

where R<sub>1</sub> is diaminocycloalkyl and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$---$$
O  $--$ C  $--$ C  $--$ R<sub>5</sub>

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, said platinum complex having the formula

$$R_1 \overline{\phantom{a}} P_t \overline{\phantom{a}} X_2$$

where  $R_1$  is as defined above and X is halogen, and where said liposome comprises dioleyl phosphatidyl glycerol and is the product of a process comprising mixing chloroform solutions of lipids.

75. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising adjusting the pH of a composition containing a liposome-entrapped first compound in the presence of sodium chloride, so that the pH is made acidic, said first compound having the formula

- 9 - NY2: 1489820.1

where DACH is 1,2-diaminocyclohexane and R<sub>2</sub> and R<sub>3</sub> independently have the formula

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, said platinum complex having the formula

where DACH is as defined above, and where said liposome comprises dioleyl phosphatidyl glycerol and is the product of a process comprising mixing chloroform solutions of lipids.

76. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising entrapping a first compound in a liposome comprising an acidic phospholipid that is dioleyl phosphatidyl glycerol, said liposome being the product of a process comprising mixing chloroform solutions of lipids, to produce a liposomal composition, said first compound having the formula

$$R_1$$
—Pt $R_2$ 

where R<sub>1</sub> is diaminocycloalkyl and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$\begin{array}{c|cccc}
O & R_4 \\
 & \downarrow \\
 & \downarrow \\
 & \downarrow \\
 & R_6
\end{array}$$

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms.

77. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising entrapping a first compound in a

- 10 - NY2: 1489820.1

liposome comprising an acidic phospholipid that is dioleyl phosphatidyl glycerol, said liposome being the product of a process comprising mixing chloroform solutions of lipids, to produce a liposomal composition, said first compound having the formula

$$R_1$$
—Pt  $R_3$ 

where R<sub>1</sub> is diaminocycloalkyl and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$\begin{array}{c|cccc}

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, said platinum complex having the formula

$$R_1$$
— $P_t$ — $X_2$ 

where  $R_1$  is as defined above and X is halogen.

78. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising entrapping a first compound in a liposome comprising an acidic phospholipid is dioleyl phosphatidyl glycerol, said liposome being the product of a process comprising mixing chloroform solutions of lipids, to produce a liposomal composition, said first compound having the formula

where DACH is 1,2-diaminocyclohexane and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$---$$
0  $---$ C  $---$ R<sub>5</sub>  $---$ R<sub>6</sub>

NY2: 1489820.1

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, said platinum complex having the formula

where DACH is as defined above.

79. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising entrapping a first compound in a liposome comprising an acidic phospholipid that is dioleyl phosphatidyl glycerol, wherein said entrapping is done in the presence of sodium chloride or chloroform, to produce a liposomal composition, said first compound having the formula

$$R_1$$
—Pt  $R_2$ 

where R<sub>1</sub> is diaminocycloalkyl and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$---$$
0  $--$ C  $--$ C  $--$ R<sub>5</sub>

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms.

80. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising entrapping a first compound in a liposome comprising an acidic phospholipid that is dioleyl phosphatidyl glycerol, wherein said entrapping is done in the presence of sodium chloride or chloroform, to produce a liposomal composition, said first compound having the formula

$$R_1$$
— $Pt$ 
 $R_3$ 

where R<sub>1</sub> is diaminocycloalkyl and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$\begin{array}{c|cccc}
O & R_4 \\
\parallel & - \\
- & - \\
C & - \\
- & - \\
R_6
\end{array}$$

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, said platinum complex having the formula

$$R_1 - P_t - X_2$$

where  $R_1$  is as defined above and X is halogen.

81. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising entrapping a first compound in a liposome comprising an acidic phospholipid is dioleyl phosphatidyl glycerol, wherein said entrapping is done in the presence of sodium chloride or chloroform, to produce a liposomal composition, said first compound having the formula

where DACH is 1,2-diaminocyclohexane and R2 and R3 independently have the formula

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, said platinum complex having the formula

where DACH is as defined above.

82. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising adjusting the pH of a composition containing a liposome-entrapped first compound, so that the pH is made acidic, said first compound having the formula

- 13 -

$$R_1$$
—Pt $R_3$ 

where R<sub>1</sub> is diaminocycloalkyl and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$---$$
0  $--$ C  $--$ 

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, where said liposome comprises dioleyl phosphatidyl glycerol, and where 20% of said first compound is transformed into said platinum complex.

83. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising adjusting the pH of a composition containing a liposome-entrapped first compound, so that the pH is made acidic, said first compound having the formula

$$R_1$$
—Pt $R_2$ 

where R<sub>1</sub> is diaminocycloalkyl and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$---$$
O  $--$ C  $--$ 

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, said platinum complex having the formula

$$R_1$$
— $P_t$ — $X_2$ 

NY2: 1489820.1

where R<sub>1</sub> is as defined above and X is halogen, where said liposome comprises dioleyl phosphatidyl glycerol, and where 20% of said first compound is transformed into said platinum complex.

84. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising adjusting the pH of a composition containing a liposome-entrapped first compound in the presence of sodium chloride, so that the pH is made acidic, said first compound having the formula

where DACH is 1,2-diaminocyclohexane and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$---$$
O  $--$ C  $--$ C  $--$ R<sub>5</sub>

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, said platinum complex having the formula

where DACH is as defined above, where said liposome comprises dioleyl phosphatidyl glycerol, and where 20% of said first compound is transformed into said platinum complex.

85. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising entrapping a first compound in a liposome comprising an acidic phospholipid that is dioleyl phosphatidyl glycerol to produce a liposomal composition, said first compound having the formula

$$R_1$$
— $Pt$ 
 $R_3$ 

where R<sub>1</sub> is diaminocycloalkyl and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$---$$
O  $-$ C  $-$ C  $-$ R<sub>5</sub>

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, and where 20% of said first compound is transformed into said platinum complex.

86. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising entrapping a first compound in a liposome comprising an acidic phospholipid that is dioleyl phosphatidyl glycerol to produce a liposomal composition, said first compound having the formula

$$R_1$$
—Pt  $R_3$ 

where R<sub>1</sub> is diaminocycloalkyl and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$----$$
O  $---$ C  $---$ C  $---$ R<sub>5</sub>

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, said platinum complex having the formula

$$R_1$$
— $P_t$ — $X_2$ 

where  $R_1$  is as defined above and X is halogen, and where 20% of said first compound is transformed into said platinum complex.

87. (new) A liposomal antitumor composition comprising a platinum complex, the composition formed by a method, the method comprising entrapping a first compound in a liposome comprising an acidic phospholipid is dioleyl phosphatidyl glycerol to produce a liposomal composition, said first compound having the formula

where DACH is 1,2-diaminocyclohexane and R<sub>2</sub> and R<sub>3</sub> independently have the formula

$$---$$
0  $---$ C  $---$ R<sub>5</sub>  $---$ R<sub>6</sub>

where R<sub>4</sub>, R<sub>5</sub> and R<sub>6</sub> are each independently hydrocarbon moieties having from 1 to about 10 carbon atoms, said platinum complex having the formula

where DACH is as defined above, and where 20% of said first compound is transformed into said platinum complex.

- 88. (new) The liposomal antitumor composition of claim 57 wherein in step (a), greater than 80% of said first compound is transformed into said platinum complex.
- 89. (new) The liposomal antitumor composition of any one of claims 82-87 wherein 50% of said first compound is transformed into said platinum complex.
- 90. (new) The liposomal antitumor composition of any one of claims 82-87 wherein 90% of said first compound is transformed into said platinum complex.
